

Organizations have long known the value of identity governance and privileged account management programs; they are foundational elements of any modern security strategy. In today's everchanging security landscape, many organizations have implemented both solutions, yet both initiatives occur independently. As a result of these silos, organizations lack the ability to have a unified view of an identity and its associated user accounts, entitlements and activity. In addition, they lack the ability to automate the provisioning of access to privileged accounts, enforce unified access policies and apply consistent governance practices. All these aspects contribute to potential access violations, increased risks and non-compliance with regulations.

When it comes to truly securing user access, you need a comprehensive view of all privileged and non-privileged account access. SailPoint integration with BeyondTrust Privileged Access Management Platform gives you that oversight.

The combined solution enables enterprises with a streamlined process for account and entitlement provisioning / deprovisioning, access request approvals and workflow, maintain strong and consistent security and compliance controls. IT organizations get full visibility and enhanced security of users and accounts including access certification, separation of duties policy enforcement, privileged credential vaulting and rotation, privileged session monitoring and management, and more.

With the integration of SailPoint and BeyondTrust, organizations may now apply the full spectrum of security controls over privileged accounts from a single pane of glass view.

**Effectively Manage
User Access
for Both Privileged
& Non-Privileged
Accounts**

The integrated SailPoint and BeyondTrust solution allows organizations to answer, "is that access appropriate for privileged users?" and "is that privileged access being used appropriately?"

Benefits of Combined Solutions

Automated Access: Increase productivity with automated privileged account access based on corporate policies.

Centralized Management: Provide a complete, centralized view of each identity's access across all standard and privileged/shared/system accounts.

Reduced Risk: Remove privileged access blind spots and continuously remove unnecessary privileged accounts as users switch jobs or leave the company.

Features and Capabilities

Automate governance controls: Provide a complete view of an identity's access and its associated privileged accounts. Governance controls help meet compliance regulations, ensure users who have privileged and non-privileged access avoid toxic combinations and eliminate over-entitled users.

Streamline delivery of access: Establish centralized administration and control over all privileged and non-privileged accounts from within SailPoint enabling delivery of privileged access based on user role or lifecycle event changes.

Improve security and administration efforts: Out-of-the-box credential cycling enables privileged account management solutions to store and manage SailPoint service account credentials, retrieving them only when performing identity tasks.

Standards-based SCIM (System for Cross-domain Identity Management)

Integration: Ensures the automated exchange of user identity information between systems and allows privileged account vaults and associated entitlements to be visible and managed throughout the identity governance process.

Thanks to SailPoint and BeyondTrust's integration module, businesses can gain visibility into these special accounts, govern them from a centralized location, rapidly grant access to ensure productivity, and do all of this through the use of accepted industry standards which reduce implementation time and cost.

SAILPOINT: THE POWER OF IDENTITY™

sailpoint.com

SailPoint, the leader in enterprise identity management, brings the Power of Identity to customers around the world. SailPoint's open identity platform gives organizations the power to enter new markets, scale their workforces, embrace new technologies, innovate faster and compete on a global basis. As both an industry pioneer and market leader in identity governance, SailPoint delivers security, operational efficiency and compliance to enterprises with complex IT environments. SailPoint's customers are among the world's largest companies.
